Burton Safes are the trusted safe and vault supplier. With a high-quality product range of over 100 tested and certified fire and security safes we have been serving the Locksmith and business world for over 30 years.

We have a range of solutions for securing keys for the home, healthcare, garages, banks, hospitals, and business users which includes a range of Police preferred solutions, larger key storage solutions, remote critical access, and intelligent key management systems.

THE SURE DEFENCE

The Sure Defence Team provide a fully managed and personal high security service to protect your home or business. From initial sales advice, to survey, CAD drawings, supply, and installation we are one of the few UK companies providing the full design and engineering services.

Our award-winning ATM and Banking physical security systems and services are used by ATM manufacturers, financial institutions, independent ATM deployers and banks across the world. We offer protection systems for all known physical ATM attacks.

With our Design & Innovation engineering centre we are able to manufacture our own customised physical security products. We employ highly skilled, fully trained, and vetted safe & vault engineers to provide our customers with safe opening, repairs and installation services.

Safes and Secure Storage

Our comprehensive range of Home Safes and Domestic Security Solutions.

Burton Safes is extremely proud of how far we have come as a business. Our founder Norman Berry started selling a few safes from his garage in Kirkburton in 1990 to churches and the Locksmith trade.

30 years later we are now the UK's leading safe and vault provider and security company providing a large selection of physical security solutions to the trade, commercial and banking customers across the UK and around the world.

Burton Safes core principle is to ensure products are tested to the highest standards. We are proud to have tested products to LPCB standards and feature in RedBookLive.

Our SURE DEFENCE team are qualified in security design and consultancy. Dedicated account and project managers ensure an unrivalled customer experience.

We have created world-class and award-winning security products and services that keep you safe now and into the future.

WARRANTY Up to 5 Years

All our safes come with a 2 year warranty as standard. Consumers can Register on-line to increase the warranty to 5 years where products show the 5 Year Consumer Warranty badge. Security Safes displaying the Home series Safe For Longer free replacement badge benefit from the 5 year warranty and a free replacement in the event of burglary. Fire and security safes displaying the Home Series Safe For Longer badge benefit from the 5 year warranty and a free replacement in the event of burglary or a fire.

5 Year consumer warranty badge

Free replacement in the event of burglary badge

Free replacement in the event of burglary or fire badge

Please register online to qualify for the additional warranty at www.burtonsafes.co.uk
Terms and conditions apply

SAFE LOCK Standards

EN1300 - This is a standard for safe locks. The locks are subjected to various durability and manipulation tests and given one of four grades from A - D.

All safes and strongrooms certified to EN14450 and EN1143-1/2 must have a certified lock that reflects the grade of the safe

- **EN14450** and EN1143-1/2 Grade 0-II must have 1 lock certified to Class A
- **EN1143-1/2** Grade III must have 1 lock certified to Class B
- **EN1143-1/2** Grade IV and V must have 2 locks certified to Class B
- **EN1143-1/2** Grade VI to X must have 2 locks certified to Class C

SAFE Standards

Every safe and vault which is certified to EN 14450, EN 1143-1 & EN 1143-2 should have a certification plate on the back of the door. This gives you important information about the product and its security rating.

EN14450 - This is a burglary attack test standard for safe cabinets. It largely covers smaller, home safes and cabinets for commercial applications. Safes are attacked using a set list of tools, and scores are given depending on the time taken to make hand holes and larger full size access holes

EN1143-1 - This is a burglary attack test standard for Safes, ATMs and strong rooms. It is the main standard used throughout Europe to assess the security level of safes and it is much more demanding than EN14450. Safes are attacked using a set list of tools, and scores are given depending on the time taken to make hand holes and larger full size access holes. There is a large range of security grades within the standard from 0-XIII. There are also optional tests to prove resistance against core drilling CD and explosives EX

EN1143-2 - This is a very similar standard to EN1143-1 but it is specifically designed for deposit safes and systems. In addition to the normal tests of EN1143-1 there are additional tests to assess the ability to fish items out of the deposit systems. If you are purchasing a certified deposit safe, make sure that it is certified to EN1143-2 and not EN1143-1

Safe Fire Standards

EN1047 - This is a very rigorous fire test for safes and data rooms. Safes are subjected to very high external temperatures inside a furnace of approximately 900 °C. Internal temperatures are closely monitored with numerous thermo-couples. There are three levels of protection given:

- P** - Paper documents that will lose data above 170 °C
- D** - Computer media that will lose data above 70 °C and humidity above 85%
- DIS** - Computer media that will lose data above 50 °C and 85% humidity

This particularly tough standard also includes a drop test to simulate a safe falling through a collapsed floor, and a soak out period, where the safe must naturally cool down as it would in a real life situation

EN15659 - This is a similar standard to EN1047 but it does not include the drop test or the soak out period. It is therefore not quite as rigorous. It also only covers protection for paper, not computer data

Gun Cabinet Standards

Sold Secure - A burglary attack test covering various products including home safes, cabinets, key safes, gun safes and gun cabinets. They have three ratings of Gold, Silver and Bronze

BS7558 - This is a British standard for gun cabinets. The required threshold to pass this test is lower than EN14450 or EN1143-1

Test and Certification Bodies

ECB-S

A world renowned German certification body, certifying safes, strongrooms, ATMs and security doors. They are accredited to ISO-IEC 17065.

ICIM

This is an Italian certification body.

LPCB

This is the Physical Security test and certification arm of BRE. BRE is a much larger, British testing and certification body with a global reputation.

SBSC

This is a Swedish certification body.

Secured by Design

This is a UK Police run initiative offering certification to multiple security products and also wider schemes.

Sold Secure

This is a British test and certification body, owned and run by the Master Locksmiths Association.

VDS

Leading German testing and certification facility.

Trade Organisations

AiS

The Association of Insurance Surveyors is a UK body of risk control and reduction experts, who work within the insurance market.

ESSA

This is a global trade organisation for Safe, Strongroom, ATM and Security Door manufacturers and distributors.

BRITISH SAFE AND VAULT TRADE ASSOCIATION - BSVTA

is the UK trade body for the safe industry. They promote good standards, certification and ethical practices.

Eurosafe

This is the European parent organisation of BSVTA.

MLA

Master Locksmiths Association is the main trade body in the UK for locksmiths.

Secured by Design

This is a Police accreditation scheme for security product manufacturers and distributors.

NAEP

Founded in 1997, organisation championing the appropriate care equipment in the community.

FSQS

Community of financial institutions including banks, building societies, insurance companies and investment services that form a buying group.

Safe Contractor

Being part of the Safecontractor accreditation scheme checks mean we meet the necessary requirements around health and safety, equal opportunities, diversity and environmental management practices. So our clients can be confident about us and reduce risk in their supply chain.

ATMIA

ATMIA is the leading non-profit trade association representing the entire global ATM industry. ATMIA serves more than 11,000 members from over 650 companies located in 70 countries spanning the entire ATM ecosphere, including financial institutions, independent ATM deployers, equipment manufacturers, processors and a plethora of ATM service and value-added solution providers.

E.A.S.T

The European Association for Secure Transactions was formed as the European ATM Security Team in 2004 to focus on ATM security when card skimming was a rising issue in Europe. Its remit now covers both Terminal Security and Payment Security.

Awards

IFSEC

Burton Safes are delighted to have won the IFSEC Physical Security Product of the Year 2013 award. The award was given for the Eurovault Atlas Grade 7, the UK's highest rated security safe to have passed the European EN1143-1 Grade 7 attack test.

IFSEC / FIREX

IFSEC AND FIREX COMBINED SECURITY & FIRE SOLUTION OF THE YEAR WINNERS What a result for the GP-X, designed and manufactured by the ATM SAFE team! We won Combined Security and Fire Solution of the Year at the IFSEC Security Excellence Awards 2015.

ATMIA

WINNER of the prestigious 2018 ATMIA Global Industry Security Award for ATM Physical Security Excellence for our best-in-class ATM gas attack and fire protection system the GP-X.

High Security Safes

From £100k jewellery rating to Europe's Highest security safe providing £2.5M jewellery rating; all of our high security products are independently tested and certified by internationally recognised test houses and validated by the Association of Insurance Surveyors.

At Burton Safes we work on some of the world's most secure sites. That experience filters into our products and the benefits reach you. Our range contains models with features such as double walled steel products with ultra-high performance concrete, certified fire protection, relocking devices, glass plates, and special drill protective elements for the lock and bolt work.

We deliver key and electronic locking solutions, including the use of the latest biometric technology.

Our locking solutions include features such as alarm and CCTV integration, dual user entry, time delays and windows, duress codes, temporary and one user time codes to name a few. We also have a wide range of optional extras to provide for every eventuality, whether that be jewellery inserts or additional shelves.

Internal Light

- Enables you to see your belongings, even when your safe is in a dark cupboard
- Belongings can be displayed as well as protected
- Uses magnets to attach to the safe interior, no installation required
- Batteries included

Shelves

Additional, replacement and reinforced shelves holding up to 50kg. We have a wide range to suit our products and your needs.

Left Hand Hinge

Where available Burton Safes can provide your safe with a left-hand hinge.

Fixing

We have a range of fixing kits available to install your safe:

- **Concrete**
- **Wood**
- **Chemical**
- **Adhesive**
- **Plinths**
- **Underfloor**

Colour Options

Available on nearly all of our range - we can offer a choice of paint colours on most of our safe models. Choose from our 4 most popular colours or supply your own RAL colour for the exterior of the safe.

Safe Deposit Options

Add deposit features to your safe!

- Internal coffer
- Deposit slots
- Preparation for air tubes

Safe Limpets

- Piezo vibration detector
- Integral analyser
- Thermal and proximity sensor
- Magnetic interference and supply failure detection
- Connects to your building alarm system
- Prevents operation of your safe whilst the alarm is activated

Signal Blocker

The sure defence for contactless cards, keyless vehicle keys and distracted driving.

- Police Preferred Specification
- Fits all key fobs, smart cards and phones
- Blocks all signals from cards, key fobs and phones
- Blocks GPS tracking
- Expertly tested to a 99% success rate
- Double stitched reinforced seams
- Spare pouch

Seismic Sensor

- Detects specific vibrations from unauthorised attempts to penetrate the safe
 - Fast reacting alarm system
- Has optimum sensitivity, detecting unauthorised access and preventing false alarms
 - Suitable for noisy environments

We can also provide door contacts and opening counters

Wall & Underfloor Safes

Our range of Wall and Underfloor safes provide a concealed option to protecting cash, documents and valuables. From deterring thieves and satisfying insurance requirements, to providing protection from flood damage.

Installing a Wall or Underfloor safe can help where space is a premium or where security and peace of mind of a hidden safe is desired.

Our wall safes are ideal for operating at head level and keeping away from ground level should flooding be a risk. With a £4k cash, £40k valuables and £6k cash and £60k valuables options we should have you covered.

The Sotto underfloor safe is unique by providing an adjustable telescopic depth adjustment, stylish dust cover lid and recommended £4k cash and £40k valuables cover.

The Oculito underfloor safe is supplied with a high quality water-tight lid, steel mesh neck with a recommended £17.5k cash and £175k valuables cover.

Fire Safes

Our Fire Safes are The Sure Defence® against fire damage. Our fire safe range can protect documents and data for an hour in temperatures of up to 900°C. Don't just protect your valuables against fire, secure them within double walled steel structures filled with fire and security composite.

Furthermore, these models can offer optional fittings making them specific to your requirements; mechanical combination, electronic PIN or, the advanced biometric locking system; adjustable shelves and an option of pull-out shelves, hanging frame and lockable coffers.

The range offers safes that are tested and certified to EN15659 LFS 60P by ECBS (world renowned German certification body) and NT Fire 60DIS- 120DIS. If you require fire protection for your safe, you should only purchase products that have been independently tested and certified.

A black metal safe with its door open, revealing interior shelves and a heavy locking mechanism. The safe is shown from a three-quarter perspective, highlighting its sturdy construction and secure door.

Gun Safes & Cabinets

The Gun Safe range is suitable for shot guns or rifles and accommodates most models with scopes and silencers fitted. Secure store your guns in high security gun cabinets that are made to the Police Preferred Specification under the Secured by Design scheme.

These models are ideal to secure a gun collection, with high density foam gun holders and base, holders for cleaning rods and ammo belts, internal lockable ammo box and optional side shelf for other valuables. Furthermore, this range has a choice of locking options: single key, mechanical combination, electronic PIN, or biometric locking system.

Our Pioneer, Warden LFS and Gamekeeper models have been tested and certified to the Sold Secure Firearms Cabinets Standard SS302:2020 Bronze, Silver and Gold respectively.

We are proud to be first to achieve all 3 British test standards certified by Sold Secure which is owned by the Master Locksmith Association.

Add 50mm to external depth for handle and hinges. Ammo box on Gold 9 reduces internal height by 195mm

Hotel Safes

The Hotel Safe range has a simple locking system that can be used with complete ease and by multiple users. These models have display screens, back lit buttons and audible sounds to easily guide users through their operation.

The guests can choose a 3-6-digit code; few enough digits to prevent guests forgetting, whilst also being secure. In the case of a guest forgetting or, if the batteries in the lock run out: this range features an override emergency key and master code.

This range of products can also be ideal for student accommodation, Airbnb and domestic use.

Hotel Standard

Add 15mm for the keypad and handle

Retail Safes

Deposit safes have become a necessity for businesses as hold up situations and internal fraud have become an increasing threat. Some of these safes have been independently tested and certified to EN143-2 by ECBS.

Having a separate deposit drawer means staff can deposit cash/valuables without having access to the main safe.

Both the drawer and the safe door are fitted with separately operated high security locks. These models have optional locking including mechanical combination, electronic PIN or advanced biometric locking systems.

Till Safe

 **Cash Rating**
£4,000 or £10,000

 **Jewellery Rating**
£40,000 or £100,000

Add 45mm to external depth for handle on sizes 1 and 2

Cashguard Vehicle Safes

- Ideal for use in vans / lorries on delivery rounds
- A range of deposit slots and security levels to suit your requirements
- Base plates attach to the vehicle and the main safe body is locked into these
- The safe has two locks, one for the base plate and one for the safe door
- The two locks are on different keys.
 - This allows drivers to move the safe from the base plate without having access to the contents of the safe

Only suitable for indoor use

*Safe locks certified in accordance with
EN1300 are not permitted to be opened
by fingerprints only (without additional
code entry).*

**New featured product Dual fingerprint and code
lock upgrade available on all graded safes**

Important

- Always carry out programming when the lock is open and safe door is open.
- Before closing the safe door, make sure that all the programming is correct.
- Check a new code at least 3 times before closing and locking the door to ensure that the code has been changed correctly.
- The system does not allow the master code, the manager code, and the user code to be set at six zeros (0-0-0-0-0-0) or six nines (9-9-9-9-9-9).
- To save battery power, the system switches to standby mode if no button is pressed within 10 seconds. Standby mode is indicated by two short beeps. Input processes that have not yet been completed must be repeated completely.
- Do not allow your personal code to be spied on. When entering the code, always cover the keypad as well as possible so that no one can see which numeric key you are pressing.

Locking

At Burton Safes we have a huge range of locking options.

See page 66 for full details on our recommended models.

With the original design concept of being 'Easy to use' the KABA Axessor USB delivers a huge range of functions, via a simple visual input unit. One interesting feature is the DURESS function. This facility enables the lock to be connected to an alarm system, activating a silent signal to a remote monitoring station or to the Police when the user is under 'duress' by entering a slightly different code – this can also trigger a time delay if programmed.

Kaba Axessor USB

- Duress Code
- 18 Users
- Time Delay
- Time Lock Periods
- Battery Powered
- Clear Display
- Dual / 4 Eye Function
- Audit Trail of 10,000 events
- Alarm Connection
- Wrong Try Lockout (4 false attempts)
- Tamper Function
- Holiday Periods

The KABA Axessor USB is one of the most efficient and reliable locks on the market – suitable for domestic and commercial use, contact the office for a full description and to discuss your locking needs.

Insys flex ID

A flexible locking system for security containers like gun cabinets, safes, secure cabinets or entry and access doors. Access takes place contactless via RFID card or RFID tag. Stand alone or with a state of the art software system, Elocomm, for programming, control and audit. The Flex brings full access control functionality to your secure storage needs.

- High-quality motor lock and compact RFID reader unit
- Easy, quick opening via RFID card/RFID tag
- Easy enrolment of additional users without configuration software and keypad
- Adding of up to 99 additional cards/tags possible
- Manipulation blocking and automatic locking
- Emergency power supply
- Time delay, dual code and external release/blocking (only EloStar® flexID multi)

Safe Lock Terminology

Users – Unique individual's code that can be controlled by a "Master" or "Manager".

Dual user – If Dual user mode is set in your safe it will require two different user codes to open the lock. This means two people will need to be with the safe to open it, this helps prevent internal fraud.

Courier Code – Courier codes are generally used by CViT (cash and valuables in transit) to bypass any time delay settings within the safe and sometimes the time windows.

Duress Code – A duress code is a covert distress signal. When you input the code, a silent alarm will be sent to the Police or a monitoring station in the event that you are forced to open your safe.

The Duress code can still open the lock to the safe.

One Time Code – OTC (one-time code) is a code that can be created and passed to a user to open the safe – once they have used that code it will become invalid. These are often used by CViT (cash and valuables in transit) operators.

Time Delay – A time-delay is a setting that delays the unlocking of the lock by a user-definable period. After entering your code you wait the set time before you enter your code a second time to open the safe.

Time Lock – Weekly programmable timer installed inside, which allows the user to set time intervals that control when the safe opens – i.e. you can open the safe in-between 9am and 5pm but not outside of those hours even if you know the code.

Audit Trail – This logs every event within the safe – Which user opened and closed the safe, at what time. It will never show the code, just the user number i.e. User 2 opened the safe at 2:30pm 30/08/2018.

Biometric Option – Fingerprint controlled security lock. These locks come with the option of fingerprint access, code access or both.

Swing Bolt – Once a correct code is entered, the lock is released, allowing the boltwork to move when turning the handle.

Dead Bolt – Once a correct code is entered, the user has to manually move the locking bolt, usually by turning the keypad.

Motorised Bolt – Once a correct code is entered, the lock moves the locking bolt via an electronic motor.

THE SURE DEFENCE

Key Security

Key Safes

The Key Safe range is the perfect security solution for securing and storing keys. This range includes Keyguard allowing authorised access to carers, cleaners, workmen, dependents, holiday lets, and key cabinets designed for use in showrooms, garages, universities, schools and large commercial sites.

We provide products that answer a variety of requirements: UK Police Preferred Specification under the Secured by Design scheme, and the Keyguard Digital XL is certified to LPS1175 (Issue 8) A3.

LPS1175 Issue 8 is an independent attack test certification. A tool list is selected and then time given to withstand a physical attack. Keyguard XL is the first key safe to achieve this level.

LPCB is part of the BRE Group, the world renowned certification and testing facility who test and certify products to the very latest attack methods.

High Security Solution
for storing keys

Keyguard Digital XL

- The world's first key safe to be successfully certified to LPS1175 Issue 8
- Police Preferred Specification
- Independently tested and certified to LPS1175 Issue 8 A5
- Permanent, lightweight, weather-resistant cover provided. This doubles as a fixing template for quick and easy install
- Bright numbers and indicators for ease of use
- Internal key hook
- Over 4,000 possible code combinations
- Code can be changed multiple times
- Allows storage for multiple keys or key cards
- Fixings are provided
- Also certified for fixing to rendered walling
- 5 year warranty

THE LUXURY RANGE

The Luxury Range from Burton Safes offers our clients the highest level of security, engineered to the most detailed level of precision. With over 30 years experience providing global security solutions, we have built a reputation around luxury, security, integrity and customer service.

Burton Safes is a leading supplier of luxurious security solutions, customised in Yorkshire, UK and delivered Worldwide. Our dedicated team of security experts work with our clients every step of the way, from design, planning and implementation.

We understand that each project is different which is why we build a security solution bespoke to each client. This could be a custom designed safe or even an internal security door, to aesthetically match other doors within the property.

Our Head Office and customising facility in Holmfirth, in the heart of Yorkshire, UK, is also the home of our Eurovault LX luxury safe. Our Eurovault LX offers a complete bespoke solution to create your perfect safe. Our team of expert craftsmen and women strive for perfection to create every unique Eurovault LX masterpiece.

The finest solid wood, hand crafted jewellery drawers finished in luxurious suede or leather offering the highest standards of British craftsmanship. Jewellery drawer layouts to suit all type of valuable possessions, including the option of integrated watch winder modules to show off the finest time pieces. Our expert team have designed and created bespoke luxury safes that have been delivered worldwide.

THE LUXURY RANGE

FROM BURTON SAFES

AS BESPOKE AS YOUR INDIVIDUAL NEEDS

We offer a unique experience with over 30 safe sizes available. They are handcrafted in Yorkshire, UK. Our bespoke safes are finished to the highest standard. Our team of expert craftsmen and women provide luxurious, bespoke solutions. We can meet almost any requirement. Including handmade jewellery drawers and hand crafted upholstery. We use only the finest suede and leather.

We understand that each project is different. Which is why we build a security solution bespoke to each client. From matching colour swatches from your favourite car. To hand-stitching your family crest into the interior. We can ensure your safe is the only one of its kind in the world.

The Eurovault LX range is available in a variety of sizes with security grades ranging from EN1143-1 Grade 1 up to Grade 7. Other options in the range are glass fronted display cabinets and gun safes.

- Jewellery and valuables cover from £100,000 to £2,500,000
- Over 30 safe sizes available
- We can offer luxury security doors and panic rooms installed to meet you and your home's security needs
- Full design, consultancy and installation provided by the Burton Safes Luxury Team

When you place an order you will be assigned a project manager. They will oversee the process from design to build, to the final installation. With over 30 years experience of providing security solutions globally we have built a reputation of integrity and customer satisfaction and helped keep homes and families safe for decades.

AN EXCLUSIVE RANGE OF EXQUISITE SAFES USING THE FINEST MATERIALS. ALL HAND FINISHED USING THE BEST BRITISH CRAFTSMANSHIP TO GIVE THE SAFE YOUR PERSONAL TOUCH.

Physical Security Solutions

High Security

THE SURE DEFENCE

Physical Security Solutions

From the world's most advanced safe deposit centres in Hong Kong, to securing cash, bullion and valuables in banks and retailers across Europe and the Middle East; the team at Burton Safes have the experience to advise, design and deliver physical security solutions to protect you and your assets.

The High Security team have over 85 years' worth of security industry experience and are qualified in security design and consultancy. Dedicated account and project managers ensure an unrivalled customer experience.

Burton Safes core principle is to ensure products are tested to the highest standards. We are proud to have tested products to LPCB standards and feature in RedBookLive.

Burton Safes delivers
The Sure Defence

STANDARDS

The Sure Defence

All strongrooms certified to EN1143 must have a certified lock that reflects the grade of the solution

- Strongrooms certified to EN1143-1 Grade XI and XII must have 3 locks certified to Class C or 2 locks certified to Class D
- Strongrooms certified to EN1143-1 Grade XIII must have 2 locks certified to Class D

The standards below can be found in our Sure Defence ranges:

LPS1175 - This is an independent standard published by BRE. It can be applied to products used to form all layers of physical security, including the perimeter (e.g. fences and gates), building fabric (e.g. doors, windows, shutters and walling), enclosures and cabinets. Issue 8 defines eight levels of threat (A to H) and six levels of delay (1, 3, 5, 10, 15 and 20 minutes).

EN1627 - This is a European burglary attack test standard for security doors. There are 6 security levels from RC1 - RC6

EN1063 - This is a bullet resistance test for glass. There are 7 levels from BR1 - BR7

EN1522 - This is a bullet resistance test for doors and systems. There are 7 levels from FB1 - FB7. All parts of the door are tested, including door furniture, frames and joints

LPCB EXPLAINED

LPCB certification is recognised by insurers, consultants, architects and risk managers across the globe.

Products that are tested to LPCB standards can reduce liability for our customers because of the demonstrated due diligence that having a product certified provides.

Products are rigorously assessed in order to achieve certification. Testing and evaluation makes up an early part of the process, followed by auditing the factory production to ensure high standards are maintained.

Once the product is successfully certified, it is then listed on [RedBookLive](#). It is here that our products are seen by specifiers to verify the status of our tested products.

Once a product has been certified, continuous audits are carried out to ensure that certification is maintained.

Bespoke Ballistic Panic Rooms, Kensington, London

We were approached by a construction company who were renovating a period property in one of London’s most affluent and prestigious postcodes.

The residence was already some way through its refurbishment and we were required to secure two rooms against both physical attack & ballistic weapons. Furthermore we were required to supply doors to these rooms that matched the others within the property, so as to blend in seamlessly with the period surroundings.

The complexity and sophistication of the building management systems resulted in a huge amount of cabling and ductwork within the walls floor and ceiling for us to work around. This made securing the installation very challenging since most of this infrastructure was already installed. As with many Embassy panic rooms that we fit, the rooms were upstairs on wooden floorboards and therefore weight was a constraint.

Our Research & Development team came up with a bespoke solution that met the full brief. The walling gave ballistic resistance to EN1522 FB4, which protects against the most powerful of handguns. In addition it was also designed to resist attacks with power tools, axes and sledge hammers.

We used our Janus Armoured Doors, also with FB4 ballistic protection. These heavily protected steel doors are clad with special decorative panels to give the impression of a normal domestic door. The panels can be matched to hundreds of different designs to match the surroundings of any building, old or new. These doors are independently tested and certified to the European Burglary Resistance Standard EN1627 RC4. They have a double lock on them which is quick and very simple to manually operate in the event that you are under threat. All of the locks and cylinders are tested and certified to the highest European standards for attack resistance EN12209 & EN1303 and the keys are protected against copying.

Kensington, London

Janus Panic Armoured Doors

Janus Panic Armoured Doors

Burton Safes Process

Sales Team

You will have a dedicated sales manager to work with you to discuss your requirements and find the right solution. Our sales team have a vast knowledge of the security industry and will ensure the solution is right for you.

Design Team

After detailed discussions to assess your requirements our design team will work on your solution, ensuring it meets the required security level.

CAD Design

Our in-house CAD design team will create drawings of your security solution allowing you to visualise the end result. Once your project is signed off we will begin the manufacturing process.

Precised Engineered

Each project is handled by a dedicated project manager who will ensure a smooth process and that deadlines are met.

Installations

Surveys and installations are carried out by our own engineering team. These are arranged with you in advance by the project manager.

Our Embassy Modular Panic Rooms and safe areas are typically designed for:

- Private Residences
- Schools
- Hotels
- Offices
- Embassies
- Jewellers
- Listed Buildings

Embassy Modular Security Rooms

Our High Security modular rooms and walling systems combined with a choice of armoured high security doors provide the perfect solution for building secure rooms to protect valuables, critical data or create custom designed safe rooms to protect your family.

With over 30 years experience designing physical security solutions for banks, cash in transit companies, ATM deployers, safe deposit centres and the largest retail companies, we are one of the few UK security companies that can offer the full Turnkey service in-house with our own R&D CAD, design and manufacturing team, surveyors, dedicated project managers and fully trained installation engineers.

Your privacy and security matter to us...

Tailor made to meet our client's budget, installation deadlines and provide the highest possible protection, we can design and build a stand-alone room solution for any building or retro fit within an existing room where weight and space are normally an issue.

Our Embassy Modular Security Rooms are typically designed for:

- Healthcare
- Pharmaceuticals and Laboratories
- Warehousing
- Arts and Museums
- Luxury and High Value Goods
- Critical National infrastructure
- Data Centres
- Military
- Gun Storage
- Retail
- Utilities
- Nuclear
- Battery Storage
- Transport
- ATM Rooms and Banking
- Safe Deposit Centres
- Cash Handling

For larger commercial secure storage please see our range of Transportable Strongrooms, the freestanding Orthrus Strongroom certified by LPS to F10 G5 (SR6) and our larger freestanding Cerberus vaults certified to EN1143-1 Grades 1 to 13.

Why choose Embassy Modular Security Rooms and The Sure Defence team?

- Award-winning Security Team
- Industry Leading Design and Manufacturing
- Most Competitive Pricing
- Fastest Lead Times in the Industry
- ISO 9001 Certified Company by LPCB
- Dedicated Sales Manager
- Experienced Survey Team
- In-house CAD Design Team
- Dedicated Project Manager
- Dedicated Installation Manager

SR2	100	40kg	5500	144min / 30min
SR3	100	45kg	5500	144min / 30min
SR4	100	60kg	5500	240min / 90min
SR5	100	95kg	3500	84min / 84min
FB6	146	135kg	Project specific	240min / 90min

*Without supports

- Designed to withstand attacks from drills, chainsaws, reciprocating saws, concrete cutters and grinders
- Increase the security of armoured vehicles, security walls, security doors, safe rooms, safes, roller shutter and many more security solutions
- Can be used in domestic or commercial properties
- Panels can be cut to any size or shape to meet your requirements
- Space saving solutions as panels are only 5-10mm thick
- Minimal weight increase with panels at just 1 - 1.5kg/pm2
- Easy to apply, and install
- Can be installed as part of manufacture or as a retro fit solution
- 4 different security levels to suit your security needs

Avertic Armour

Avertic Armour is a highly advanced, state of the art security panel providing ultra-light and effective protection against a range of power tools. It's unique properties allow it to be used across many security solutions such as cash-in-transit vehicles, panic room construction, military out buildings, secure room dividers, roller shutters and many more.

Example of vehicle panel construction

Example of secure room wall construction

The Avertic Armour Panel is available in 4 different security levels:

Anti-Drill

Contains 8 layers of protective material and provides 18V drill protection

Power

Contains 6 layers of protective material and 2 layers of the anti-cut material. It can provide protection against a concrete cutter, chainsaw and 800w grinder

Power +

Contains 4 layers of protective material and 4 layers of the anti-cut material. This product protects against a 1100W grinder, reciprocating saw, concrete cutter and chainsaws

Extreme

The most secure level of this product, contains 2 layers of protective material and 6 layers of the anti-cut material. This level protects against a 2300W grinder, reciprocating saw, concrete cutter and chainsaws

Tailored versions are available to suit security requirements

Bunkers

Underground Bunkers can provide the perfect safe room solution for protecting your loved ones and possessions. We can create bunkers for installation that will protect you and your family from outside dangers.

Customisable secure rooms with various access options for your needs that can be kitted out to your design. Using a high security steel walling system and security doors we can create your survival bunker room for peace of mind that your family are protected.

PANZER BLAST PROOF DOORS BT

Our mission is the protection of persons and facilities. For this purpose we develop and manufacture blast doors and blast equipment in different versions. The commitment to design and technical precision was instrumental for our company success.

PANZER Blast Proof Doors BT built in highly efficient design by means mixture of high-quality steel and reinforced concrete.

The BT1, BT2 and BT3 are swing doors with lateral hinges to allow opening from in-and outside.

The doors are tested in the laboratories under real conditions and Simulated calculation by LS-Dyna and certified that they resists a shockwave from up to 9 bar/130 psi till a explosion pressure (reflected pressure) up to 28 bar/406 psi.

The doors can be equipped with an additional emergency door which is operated from both sides.

Associated Security Products

With banks removing safe deposit facilities at a considerable rate, we have found that private businesses are launching their own safe deposit centres.

With over 85 years experience in our Sure Defence team, we can supply the complete turnkey solution. We provide installation of the vault and supply a choice of four safe deposit box options. We also provide security window counters, security doors, interlock systems, access control, cash trolleys and sanitiser units.

Security Window Counters

Providing security for staff is a key ingredient to a security solution. Our security counters and windows keep staff safe while being able to serve customers from a secure office. Options include ballistic protection for added peace of mind.

Sanitiser Units

With the pandemic continuing, keeping customers and staff safe is vital. Our sanitiser units provide the perfect hands free solution.

Security Doors

Our Janus high security doors provide the perfect solution for offices, banks and prestigious or listed buildings. They are custom made to suit your requirement and a range of fittings and door furniture are available.

With a choice of two security levels, Janus doors are independently attack tested to EN1627 RC3 and RC4. Options available on request include security glazing, bullet resistance and emergency / panic hardware.

Kronos doors are suited for a high security environment and are tested to LPS1175 SR2 to SR4 by LPCB. These are custom made to suit your opening and can have different fittings built into the door. Options include single or double door sets, fire rating up to 2 hours and flood protection.

Cash Trolleys

Interlocks and Access Control Systems

Our technical team design and build interlock systems that work with the many different applications that are needed by our customers.

An interlock solution is an essential part of the package to protect staff and maintain security protection. Access control forms an important part of the interlocking solution and we can offer different solutions based on your choice of safe deposit system.

Shanghai Safe Deposit Boxes

- A range of low cost safe deposit boxes
- Ideal for use in banks, safe deposit centres or hotels
- Stainless steel facia
- Dual key locking as standard
- 6 different door sizes
- 3 standard depths - 610/510/410
- Optional pull out shelves
- Metal inner box as standard with all sizes*
- Full design and consultancy provided by Burton Safes

- except SSDBB60

Locking Options

Dual
Locking

Box Size	Internal dimensions
SSDBB 60	42 x 120 x 540/440/340
SSDBB 42	65 x 120 x 540/440/340
SSDBB 24	115 x 120 x 540/440/340
SSDBB 21	65 x 250 x 540/440/340
SSDBB 12	115 x 250 x 540/440/340
SSDBB 6	250 x 250 x 540/440/340

Vienna Safe Deposit Boxes

- A range of high quality safe deposit boxes with high security locks and advanced software options
- Ideal for use in banks and safe deposit centres
- 6mm steel door
- Stainless steel facia
- Choice of dual key or key and electronic locking system
- Electronic system offers increased security through permanent monitoring of the door status. Unauthorised entry and tampering will trigger alarms
- Electronic system offers the option of a 'self service system'. Reducing running costs for banks and safe deposit centres
- Vienna Safe Service 6.0 offers the most advanced safe deposit management system on the market - control multiple centres, control day gates and interlocks, monitor box status, record client accesses, set up billing functions and run invoicing
- Key locking systems offer a choice of security levels and lock types to suit different budgets
- Plastic inner cassettes as standard with most box sizes
- Also available in different colour options below the stainless steel facia

4	230 x 240 x 360

State-of-the-art safe deposit system increasingly used by banks to reduce running costs and offer customers increased access to their deposit boxes. No staff are required for operation of the system and the vault always remains secure. Full design and consultancy is provided by Burton Safes, contact us for more information.

Example of Vaduz vault and safe deposit box construction

Zurich Safe Deposit System

- Upgrades key locking safe deposit systems to a self service electronic operation
- Reduces staffing costs
- Increase security levels with permanent monitoring of the box status
- Alarms can be generated in the event of unauthorised access
- Simple and quick upgrade with minimal down time
- No need to open boxes to fit the system
- Wireless communication avoids damaging/disrupting the existing room
- Cheaper and less disruptive than changing your boxes to new electronic models

Safe Door Protection

Pluslocks

- Re-locker mechanisms built into high security vault doors and safes have been used for centuries, they are intended to keep the door locked during a burglary attempt.
- Upgrade low level ATM Safes to a higher level of protection.
- At the heart of our re-locker system is our Live Pluslock which adds an additional live locking position within the safe that is operated when closing the Cencon lock.
- We have installed 1000's of Pluslocks saving the industry millions of pounds over the years.

**Every additional Pluslock installed,
adds a higher level of protection**

Pull Out & Cutting Protection

ACW's, ACP & E-Frame

ACW's

The ACW's have been designed to add an additional 60+ kg of weight each to the ATM. This helps especially in locations the ATMs cannot be bolted down or have poor fixings.

The Cencon ACP

The Cencon ACP has been designed as a fast deploy deterrent (no safe access required) and protection against the cutting and drill attacks below the Cencon lock.

The E-FRAME

The E-FRAME upgrade protects against many of the recent attacks by adding a 60mm steel and composite armoured barrier in key locations of the safe door.

Ram Raid Protection Strongarm HD

Strongarm Anchor

Solution for all ATM's

Innovative fabricated internal locking system housed within an impact resistant mounting block, installed with low centre of gravity fixings.

Strongarm Plinth

Solution for TTW ATM's

The STRONGARM Anchor Plinth is a heavy duty easy level adjustable plinth designed for ease of installation and adjustment.

Strongarm Subterra

The Subterra Strongarm anchoring system has been tested with our clients in attendance. We employed a professional rescue team to try and lift the ATM out of the ground.

Door Pull Protection ADPS

Wincor 1500 Solution

The ADPS for the Wincor 1500 ATM is installed behind the safe door as a fixed device with a locking drop in component within the ATM hood.

- Heavy duty steel fabricated internal boss system with built in vertical re-locker
- External drop in locking bolts assembly locked in place using the ATM keys
- Protects the key area where the hook is installed by reducing the forces to the safe door bolt works
- Operated by unlocking the ADPS system top mounting plate by accessing the ATM hood
- The ADPS is unlocked using the same ATM key

Pull Out & Cutting Protection HALO

The HALO is designed to add complete protection and attack time delay for all internal ATM's

The HALO system is the crown jewels' when it comes to protecting internal lobby ATM's. During the design and production of the system we looked at ATM crime data, met with ATM security managers and also large retailers John Lewis, The Co-operative Group, Tesco, Asda, Morrisons and Aldi to name a few.

Dispenser & Cash Trapping Protection DACP, Dispenser & ATM Blocker

DACP – Dispenser Anti cut plate

The DACP is a steel fabrication welded and filled with our own attack resistant chemical composite mix, steel filings and re-bar that is bolted from the inside of the ATM to make a secure tamper proof fixing.

ATM Blocker

We were approached by a US ATM deployer to design a cost effective solution that could be deployed quickly to protect ATM's from cash trapping and transaction reversal fraud attacks.

Dispenser Upgrade

Dual skin dispenser upgrade developed for the NCR 5877 POD ATM to stop easy access and crow bar attacks into the purge and top cassettes. Welded onto the safe door in the workshop. Our engineers upgrade this on a door rotation system to reduce ATM down time.

OTC Smart CIT Lock Sentinel

Sentinel – Custodia

The Custodia is a smart ready high security safe lock and key pad providing one-time code CIT function via QR code. The Sentinel keypad is an elegant and flat design with the option of an inclined keypad variant with battery compartment. All Sentinel locks are VdS and ECB-S approved with the class B lock also having A2P Certified protection against burglary. The perfect upgrade for all ATM estates.

Sentinel – Oculus

The Oculus has all the features of the Sentinel Custodia but takes the lock options to new levels by communicating with our PC software for configuration and administration of the lock system or via the TwinIP extension unit for integrating the lock system into the customer network for full monitoring of the ATM safe lock.

Sentinel – Imperium

The Imperium has all the available features of the Custodia and the Oculus with the additional control via our total lock control PC software to provide full access control and management of entry doors, security doors, access control, key access and the ATM safe locks.

The options are endless –
Please ask us for our expert consultation

Case Study

Burton Security were invited to participate in a tender process for the implementation of a new ATM electronic safe locking solution. After successfully exceeding the tender requirements, we were awarded the opportunity to undertake this rollout across the client's UK network of ATM's.

The project included the supply, installation and project management of circa 1,400 ATM Safe locks across a network of 650+ branches. Working closely with the client we designed a bespoke installation process and timetable suitable for the wide variety of ATM models and operational needs of the business. Throughout the project planning several client specific functionality requests were explored, developed, tested and implemented to ensure client satisfaction beyond the original scope.

After the planning period was completed the physical installations began. Using our network of skilled and qualified safe engineers we successfully installed to each ATM, in both a live branch and factory environment.

Throughout the entire project, regular reviews were undertaken, and actions applied to ensure an efficient and cost-effective rollout. As a result of the detailed pre planning work and an efficient installation process, the project was successfully completed within the client's requested timeframe of 26 weeks, allowing them to reap the benefits of the developed solution as early as possible;

INSYS locks

- Freed up branch colleague time, removing involvement in the ATM replenishment process
- Improved security and efficiencies in the management of staff access to the Locks
- Removal of mastercodes management and responsibility - passed to Burton Safes
- Enabling efficient estate wide changes with the use of configuration cards
- Implementation of One Time Code (OTC) functionality without the need for additional infrastructure or IT Involvement including:

- Auto generation of secure OTC for CIT Access
- Real Time lock status monitoring as part of the OTC functionality

DELIVERY AND INSTALLATION SERVICES

ATM RECOVERIES

We offer a 7 day emergency recovery service for our clients in the UK when an ATM has suffered an attack. Our specialist engineers can open safe doors, remove the ATM to our secure storage and make site safe to the public.

SAFE REPAIRS AND UPGRADES

We can repair most ATM's after an physical attack in our workshops. Damaged safe doors and safe bodies can be welded and repaired by our fabrication team, while also being upgraded with ATM SAFE security products, Smaller damage can be repaired and protected on site after criminal activity.

ASSET RECOVERY

As part of our recovery team we often meet CIT teams, the Police and open safes so the assets can be recovered urgently and removed from further risk of theft.

INSTALLATIONS, REMOVALS AND MOVES

ATM SAFE have been providing Installation, Moves & Changes (IMAC services) to ATM companies and the financial sector for many years. Our dedicated project managers ensure we offer the highest level of customer attention and service.

SAFE LOCK SUPPLY AND INSTALLATIONS

As an approved distributor of Kaba, LA Gard and INSYS safe locks we can deliver an exceptional design, supply and installation service using our own qualified field safe engineering team.

SERVICING

Our dedicated ATM service desk ensures all works are professionally carried out by using our own security engineers for all service works, lock fits and security product installations.

What we do...

Burton Safes specialises in the supply, distribution, installation and servicing of **Physical Security Solutions**.

Our Goals

Be the best
Generate sustainable growth
Create a long term legacy
Create a respected and desirable brand
Generate profits for our shareholders and our staff

How we will achieve our goals

Listen to our customers and to the wider market
Deliver a first-rate customer service
Focus on our product quality
Deliver solutions not just products
Seek niche and profitable markets
Create a diverse and first rate supplier network
Constantly assess and challenge our costs, our actions and our performance
Create a stable financial foundation

Our Values

Promote and support the use of independent product testing and certifications
Promote good practice and industry standards
Be honest, fair and respectful in our dealings with customers, suppliers and staff
Help our local community and environment prosper
Be proud of our Yorkshire heritage whilst maintaining an open, global outlook
Create an enjoyable working environment for our staff, with a family atmosphere and ethos
